

Solving today's complexities of... Human Resources Management and Duty Rostering.

TriCarm Software Inc.

Now on release 3, CARM offers a host of benefits to all parts of the organization from the individual to higher management. By creating 'user profiles' that control functional access to various parts of the application and 'user views' that control organizational access, the CARM system administrator can tailor CARM to suit each different member of the organization. Thus individuals will only be able to access functions that are relevant to their role and to those parts of the organization that they need to know about.

Typically these would include profiles for:

- Each individual
- Supervisory functions
- Duty Planning functions
- Training Department functions
- Court functions
- Finance functions
- HR functions
- Management functions
- System Administration functions

Each member of the organization is able to access CARM information from any workstation on the organization network. CARM is a web based product and therefore the workstation just needs a standard IE browser to access the centrally held information. So no matter where the person is situated, they have immediate access.

CARM is paperless, real time scheduling of personnel, resource utilization and optimization with accuracy and consistency in the application of policies or collective agreements. Resource management, patrol scheduling and duty management at its finest.
